

PRESS RELEASE

**IAA 2008:**

**E.Novation BTC presents the product “DKV Tachomanager fresh”  
Faster availability of driving and resting times possible via online transmission**

Hannover, 24.09.2008 - On the IAA in Hannover this year E.Novation BTC for the first time presents the product “DKV Tachomanager fresh” (in hall 23 / stand nr. B32). The new product extension of the DKV Tachomanager makes it possible that the dispatcher is at any time shown the current driving and resting times of your drivers per online transmission.

The transmission comes via an on-board computer with built-in SIM card that is in the vehicle connected directly to the digital tachograph. The box transmits regularly - during change of activities - the current data from the digital tachograph. In this way the dispatcher in the company knows at any time how much driving time budget is available to each driver, that means how long the drivers may still drive. For the dispatcher this means a minimization of penalty risks and prevention of fines via driving time surveillance because of being warned in time of possible transgressions.

The vehicle details contain amongst other the exact position of the vehicle, the speed of the last transmission of position, the direction of vehicle movement, the driven daily mileage per driver as well as the end mileage of the vehicle. Because of the display of position data on a digital map the employment of drivers and vehicles can be monitored and dispatched better. This facilitates the planning of resources. Further advantages are overviews of current traffic jams, high way service stations as well as resting places.

On the IAA in Hannover (25.09. - 02.10.2008) representatives of E.Novation BTC are available to you for more information in hall 23, at stand nr. B32. We are pleased to invite you and look forward to your visit!

**About E.Novation BTC**

The E.Novation BTC was founded 1994 under the name of BTC Traffic Systems and taken over in May 2006 by the E.Novation B.V. with head office in Rotterdam (Capelle aan den IJssel, Netherlands). After the takeover by E.Novation B.V. followed also a re-alignment of products concerning the use of new technologies and market alignment. All new product developments are offered as software-as-a-service. That means only the use of an Internet browser with internet access is necessary to be able to access the relevant applications. Presently also all available client server applications are adjusted to the new technologies.

As developer and provider of software for the management, dispatch, positioning and accounting of vehicles, vehicle fleets and mobile machine parks the company presently advises more than 1500 clients. Together with the users E.Novation BTC analyses the business procedures and develops efficient solutions on the basis of proven standard software. The focus of the product range is on fleet management systems and the vehicle positioning as well as on the entire field around the digital tachograph.

In the last mentioned field the IT specialist together with the partner DKV Euro Service has developed the product “DKV Tachomanager” that enables a fast archiving and evaluation of analog and digital data from the tachograph.
